

With these innovative water processors, there are no chemicals or preservatives added, like there are in bottled water, thanks to point-of-use filtration! Tidal Wave's™ water processor units are uniquely designed to fit in convenient spaces. These sealed units contain a patented bacteriostatic media, KDF®, to drastically reduce or effectively remove chlorine, lead, mercury, iron, and other metals from the water. The coconut shell granular activated carbon is used to improve the taste and odor and to reduce chlorine, THMs, PCBs, and many other organic contaminants that may be present in the water.

Item#TW1500 - 1 unit
